DETAILED ACTION

Election/Restrictions

It is noted that this application contains claims to independent and/or distinct inventions (e.g method and composition). Since there is no serious burden on the examiner at this time; a restriction requirement has not be made. Applicant is reminded that a restriction requirement can be made at any time during prosecution.

Claim Objections

1. Claims 18 and 34 are objected to because of the following informalities: "well treatment fluid or the" should be deleted from the first line of these claims; since these claims depend form method claims, not fluid composition claims. Appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 10/727,365

Art Unit: 3673

1. Claims 1-47 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of U.S. Patent No. 6,764,981. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the instant application are somewhat broader than the patent claims.

Page 3

2. Claims 1-47 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of copending Application No. 10/394,461. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the instant application are somewhat broader than the claims in the copending application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 14-15, 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Williamson, et al. (U.S. Patent number 5,208,216).

Williamson teaches the fluid including water, amine-based polymer (see abstract); polysaccharide based polymer (col. 5, line 50); and an oxidizing agent (col. 6, line 66) as called for in claim 1.

Regarding independent claim 2:

Williamson teaches the forming the fluid (as above) and contacting the fluid with the formation as called for in claim 2.

Williamson also teaches the forming prior to contacting as called for in claim 3.

Williamson also teaches the guar as called for in claims 14 and 15.

Williamson also teaches the soluble peroxide as called for in claim 24.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 13 and 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williamson, et al.

Williamson fails to explicitly disclose the concentrations or ratios of polymers. Absent any showing of unexpected results; the relative concentrations or ratios are deemed to be within the scope of routine experimentation or optimization; thus the ratios of claim 13 would have been obvious to one of ordinary skilled in the art.

Art Unit: 3673

Williamson fails to explicitly disclose the starch. Starch is a well known soluble polysaccharide; it would have been obvious to one of ordinary skill in the art at the time of the invention to have used starch as the viscosifying agent as called for in claim 16. With regards to claims 17 and 18; the relative concentrations or ratios are deemed to be within the scope of routine experimentation or optimization; thus the limitations of claims 17 and 18 would have been obvious to one of ordinary skilled in the art.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Waggenspack, et al. (U.S. Patent number 6,358,889); Kohler, et al. (U.S. Patent number 5,322,123); House (U.S. Patent number 6,291,404); and Almond, et al. (U.S. Patent number 4,487,867) teach similar compositions and methods.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kreck whose telephone number is (703)308-2725. The examiner can normally be reached on M-F 5:30 am - 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on (703)308-2978. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
